

## Machine Analytics eXpert

Suitable for manufacturers and users of industrial machines and plants, MAX transforms raw data into concrete actions for your company.

powered by **4FACTORY**

### Keep everything under control

With MAX you monitor machine performance in real time and check the status of alarms and alerts, so you have everything under control anytime, anywhere.

### Health Monitoring

Reduce downtime with anomaly detection, which allows you to monitor the health of components and intervene before faults occur.

### Identify bottlenecks

With Lean Analytics you identify and solve bottlenecks and improve your overall equipment efficiency (OEE).

### Changeover

Optimise changeover times by strategically planning the order of changeovers to minimise downtime.

### Sustainability Analysis

Monitor and optimise the resource consumption of your machines and determine the factors impacting production costs.

### Smart Maintenance

With MAX your machines know when they need maintenance and can automatically order spare parts.

### Smart Notification

Configure smart notifications and back actions on the PLC level when critical events occur.

### Operator Knowledge

With MAX you identify any knowledge gaps and improve training activities.
